EDUCATION

National Institute of Technology (NIT), Warangal,

Dec 2021 – Apr 2025

B.Tech in Mechanical Engineering

Coursework: Computer Programming, Matlab, Python, Data Structures and Algorithms, Management Science, Artificial Intelligence In CyberPhysical Systems

TECHNICAL SKILLS

Languages & Analysis: Java, Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL (Joins, Window Functions, Optimization)

Data Analytics & BI Tools: Tableau, Power BI, IBM Cognos, Excel (Pivot Tables, Power Query, Macros)

Cloud & Tools: AWS (EC2, S3, RDS, IAM, Lambda, CloudWatch, API Gateway), Git, GitHub, Docker, CI/CD pipelines, Postman, VS Code, Figma.

WORK EXPERIENCE

Business Analytics Intern — Outlook Publishing Group

May 2024 – July 2024

- Analyzed **20,000+** product records using **SQL, Python, and predictive analytics**, improving sales trend forecasting accuracy by **18%** and enabling data-driven decisions.
- Developed **6+** interactive dashboards in **Tableau and Power BI** to track **10+** KPIs, boosting marketing campaign efficiency by **15%** and customer retention by **12%**.
- Automated ETL pipelines and reporting with **Python, SQL, and Excel**, reducing manual effort by **40%** and cutting report generation time from **2 hours to 30 minutes**.

R&D Intern — NIT Warangal

Nov 2023 – Dec 2023

- Designed and enhanced image processing pipelines using **Local Binary Patterns (LBP), OpenCV, and NumPy**, achieving a measurable runtime gain of **17%**.
- Leveraged **TensorFlow, PyTorch, and Keras** to prototype **CNN-based models** with transfer learning, improving classification performance.
- Curated benchmark datasets (**Corel-250**), automated evaluation with ranking models (**k-NN, SVM**), and standardized documentation for reproducibility.

PROJECTS

Real-Time Steel Damage Classification with AWS Cloud Technology | *AWS Rekognition, Lambda, API Gateway, S3*

- Built a **serverless defect detection system** on AWS (Rekognition, Lambda, API Gateway, S3) capable of processing **5,000+ images/day** for real-time quality control.
- Optimized ML models, **improving defect classification accuracy** from **82% to 93%**, reducing false negatives in automotive and aerospace inspections.
- Leveraged **parallel processing and cloud integration**, cutting analysis latency by **25%** and enabling scalable deployment across multiple production units.

Domino's Branch Sales Analytics and Visualization | *MS SQL Server, Power BI*

- Built a **sales analytics platform** in **MS SQL Server** to manage and query **50,000+** transaction records, improving reporting speed by **35%**.
- Designed a **Power BI dashboard** with advanced **data modeling and DAX**, providing real-time insights into **10+** KPIs such as sales performance, customer retention, and product mix.
- Conducted **trend analysis and demand forecasting**, boosting forecast accuracy by **20%** and enabling data-driven operational planning during peak hours.

Hand-Written Arithmetic Solver | *Python, TensorFlow, OpenCV*

- Developed a **CNN-based solver** using Python, TensorFlow, and OpenCV, achieving **95% recognition accuracy** on handwritten arithmetic expressions.
- Implemented **image preprocessing, segmentation, and character recognition** across **10,000+** digit/operator samples, improving model robustness.
- Ensured **secure evaluation and validation** of expressions, reducing misclassification errors by **30%** and enhancing reliability for handwritten input processing.

Leadership Organizational Experience

- **General Secretary — NSS, NIT Warangal (2023)** – Directed 6+ large-scale community initiatives, including a Blood Donation Camp (350+ units) and Unity Run (500 participants). Spearheaded awareness drives, women's self-defense workshops, and technical talks, engaging 1,200+ students and improving volunteer participation by 35%.
- **Head of Logistics — SpringSpree, NIT Warangal (2023)** – Managed logistics operations for South India's 2nd-largest cultural fest (5,000+ attendees), coordinating 100+ volunteers and 20+ vendors. Perfected scheduling and resource allocation, cutting setup time by 2 hours/day and ensuring seamless event execution.
